INCREASING THE VENTILATION SYSTEMS RANGE ("COMBIS") SV SERIES

10th Juny, 2009. RECTIFICADORES GUASCH S.A. increases the ventilation systems range with centrifugal fan ("COMBIS") SV series, with the high efficiency heatsink RG42080 version.

This option allows you to increase the performance equipment to reduce the thermal resistance of the cooling system.

The improvement is 8-12% compared to similar systems with extruded profile, and it allows the latest technology of power stacks semiconductor with greater security.

The catalogue includes lengths of 200, 300, 400 and 500 mm, that with the details supplied, serve as guidance for a first product selection, but other lengths can be supplied, as well mechanical drawing and also as solutions obtained by the process of the design in collaboration with Customers.

About Rectificadores Guasch, S.A. From more than 30 years serving the Spanish and Portuguese market and growing in the foreign markets with products of high quality at reasonable prices, GUASCH is consolidating as a company able to offer a wide product range in power electronics. Our independence ensures the best solution. Our product range includes power stacks, semiconductors, passive components, heatsinks, protection fuses, clamps, press-pack, firing boards and mounting accessories
